SUMMARY

MSc Cybersecurity with a BSc in Computer Science and professional experience validating enterprise banking systems. Skilled in log analysis, with a software engineering foundation for building and writing automation scripts in Python.

EDUCATION

Newcastle University - MSc Cybersecurity

Master of Science in Cybersecurity

Newcastle upon Tyne, UK

Sep 2025 – Sep 2026

Grade: Distinction (expected)

Newcastle University - BSc Computer Science

Bachelor of Science in Computer Science (Software Engineering)

Newcastle upon Tyne, UK

Sep 2021 – Sep 2024

CERTIFICATIONS

INE eCPPTv3 (Mar 2026) — **INE eJPTv2** (Feb 2026) — **CompTIA Security+** (May 2025)

EXPERIENCE

Software Test Engineer

Bank Albilad - Contractor

Riyadh, Saudi Arabia

Mar 2025 – Aug 2025

- Designed and executed 500+ test scenarios across 46 cycles and supported 4 large-scale releases, ensuring stability and compliance with business requirements.
- Analysed backend application logs to trace user actions, verify system behaviour, and identify root causes, developing log-driven investigation skills.
- Identified and tracked 34 defects, collaborating with developers and stakeholders to resolve issues before release.
- Performed gray-box and black-box testing across banking platforms (T24, Oracle ERP, ServiceNow, digital banking).

PROJECTS

TerminalRPG | *Python, Bash, Textual, Rich, Docker* | [Project Link](#)

May 2026 – Aug 2026

- Built a terminal-based cybersecurity training platform that executes Bash commands in isolated Debian containers.
- Developed a custom Python engine for mission progression, dialogue, and objective management.
- Automated environment provisioning and mission validation using Docker and Bash scripts.
- Implemented automated objective validation by inspecting Linux filesystem state using `grep`.

Homelab | *Proxmox, Kubernetes, Docker, Prometheus, Grafana*

Jan 2025 – Aug 2026

- Designed and deployed a virtualised homelab on Proxmox for cybersecurity experimentation.
- Orchestrated containerised services with Docker and Kubernetes, enabling scalable, and reproducible deployment.
- Built a monitoring stack with Prometheus and Grafana, collecting system and service metrics.
- Managed infrastructure declaratively through YAML manifests, ensuring reproducible service configuration.

Hit Box Replica - BSc Dissertation | *Raspberry Pi, CAD, Python, PyCryptodome*

April 2024 – Oct 2024

- Designed and built a custom PS4-compatible arcade controller using Raspberry Pi and 3D-printed components.
- Researched legacy controller communication protocols and integrated Python logic for handling authentication data.
- Integrated open-source input libraries with custom Python logic to emulate authentic controller behaviour.
- Supported multiple game consoles while maintaining a consistent 1 ms response time.

SECURITY TOOLS & PROGRAMMING

Programming & Query Languages: Python, Go, Bash, KQL, SQL

Security Tools: Wireshark, Nmap, Netcat, Burp Suite, Metasploit

Operating Systems & Tools: Linux, Docker, Kubernetes, Git, macOS, Tmux, Homebrew

Documentation & Markup: LaTeX, Markdown

TECHNICAL SKILLS

Security Concepts: Network Security, Identity and Access Management (IAM), Access Control, Threat Modelling

Security Frameworks: MITRE ATT&CK, STRIDE, CyBOK

Professional Skills: Security Reporting, Log Analysis, Technical Documentation

Languages: Native Arabic, Full Professional English
